

Environmental and Energy Policy

The production units within the Horst Brandstätter Group are the manufacturers of the world famous PLAYMOBIL system toys and the high-quality planters of the LECHUZA brand

In the manufacture of all our products, we are committed to the responsible use of the resources required for the production process and the impact on the environment. With successful certification according to DIN EN ISO 14001 we introduced a joint Environmental Management System for our Playmobil and Lechuza brands. With focus on our responsibilities towards resource conservation and efficient use of energy we have supplemented our Environmental Management System by an Energy Management System according to DIN EN ISO 50001 at our locations in Germany and Czech Republic. The following principles of our Environmental and Energy Policy form the foundation for on-going Environmental and Energy Management System processes for all our own production units:

- The self-evident and obligatory compliance with all legal requirements and binding obligations is our minimum standard. Where possible it is our aim to exceed these.
- Continual improvement of our production's environmental impact based on concrete objectives in order to protect our natural resources and to avoid pollution. This also includes a long term reduction of our energy consumption and enhancement of our energy efficiency.
- We consider energy efficiency in our design and purchase processes of new facilities, products and services, which are destined to improve our energy related performance.
- We train our employees to make them aware of how their work impacts on the environment and to use energy in a responsible way.
- We involve our suppliers and sub-contractors in our Environmental Management System so that they can also conserve the required resources and take advantage of potentials for conservation and reusability.

The Corporate Management as well as all employees support this Environmental and Energy Policy. We are committed to actively applying the principles of our Environmental and Energy Management System with the aim of continuously improving environmental performance and energy efficiency. We work together to implement this so that children may continue to grow up and play in a healthy and liveable environment.
